the 1990s, the number of people in the world who are under 15 years of age has increased by 1.2 billion, from 1.1 billion in 1980 to 2.3 billion in 1999. The number of people aged 15 years and over has increased by 1.1 billion, from 1.1 billion in 1980 to 2.2 billion in 1999.

There are a number of reasons why the world population is growing so rapidly. One of the main reasons is that the number of children born to each woman has increased. In 1980, the average woman in the world had 2.5 children. In 1999, the average woman in the world had 2.7 children.

Another reason why the world population is growing so rapidly is that the number of people who are surviving to old age has increased. In 1980, the average person in the world lived for 55 years. In 1999, the average person in the world lived for 65 years.

There are a number of reasons why the number of people who are surviving to old age has increased. One of the main reasons is that the number of people who are dying from infectious diseases has decreased. In 1980, 10 million people died from infectious diseases. In 1999, 5 million people died from infectious diseases.

Another reason why the number of people who are surviving to old age has increased is that the number of people who are dying from non-infectious diseases has decreased. In 1980, 10 million people died from non-infectious diseases. In 1999, 5 million people died from non-infectious diseases.

There are a number of reasons why the number of people who are dying from non-infectious diseases has decreased. One of the main reasons is that the number of people who are smoking has decreased. In 1980, 1 billion people smoked. In 1999, 0.5 billion people smoked.

Another reason why the number of people who are dying from non-infectious diseases has decreased is that the number of people who are eating a healthy diet has increased. In 1980, 1 billion people ate a healthy diet. In 1999, 1.5 billion people ate a healthy diet.

There are a number of reasons why the number of people who are eating a healthy diet has increased. One of the main reasons is that the number of people who are eating more fruits and vegetables has increased. In 1980, 1 billion people ate more fruits and vegetables. In 1999, 1.5 billion people ate more fruits and vegetables.

Another reason why the number of people who are eating a healthy diet has increased is that the number of people who are eating less fat and sugar has increased. In 1980, 1 billion people ate less fat and sugar. In 1999, 1.5 billion people ate less fat and sugar.

There are a number of reasons why the number of people who are eating less fat and sugar has increased. One of the main reasons is that the number of people who are eating more whole grains has increased. In 1980, 1 billion people ate more whole grains. In 1999, 1.5 billion people ate more whole grains.

Another reason why the number of people who are eating less fat and sugar has increased is that the number of people who are eating less meat has increased. In 1980, 1 billion people ate less meat. In 1999, 1.5 billion people ate less meat.

There are a number of reasons why the number of people who are eating less meat has increased. One of the main reasons is that the number of people who are eating more plant-based foods has increased. In 1980, 1 billion people ate more plant-based foods. In 1999, 1.5 billion people ate more plant-based foods.
